STACK

Chattree (private micro-blogging platform)

- A place users can post text updates, content and links directly to their followers as private messages
- *Frontend:* NextJS/Tailwind, *Backend*: Flask/Postgres
- Future integrations include a chat powered with socket.io web-socket and mongoDB
- frontend preview (backend not deployed yet)

Cult.trip (static website)

- Website for Sydney record label using NextJS and tailwind
- Future integration with Shopify SDK planned
- Preview

Narma (messaging app API)

- Narma is a mental health app aimed at providing users a virtual support network that send messages throughout the day
- The backend API was built with Flask and is yet to be deployed
- Homepage Preview

Film Spot (Python terminal app)

- A terminal app built on IMdB's top 1000 movies of all time database. Users can create an account, search the db, add films to their watch list, get recommendations and play trivia.
- Download
